

Acco₂ntenterprise provides organisations with robust carbon management & accounting solutions. It enables organisations to measure, manage, plan, store & report emission data, track performance of their carbon footprint at multiple organisational levels & accurately model reduction strategies.

KEY FEATURES

User Management

- Management of user portfolios, roles and groups
- Enterprise access control, security, and distributed administration

Data Management

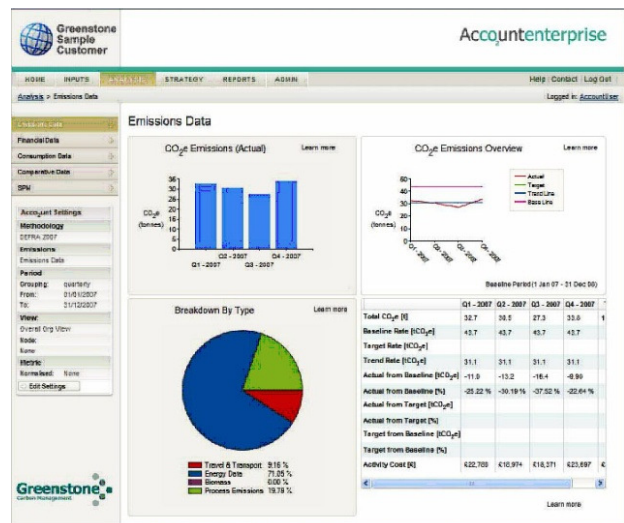

- Organisational structures, hierarchies and emission sources management & upload: manually, spreadsheet
- Emission data upload: manually, spreadsheet, direct integration
- Complex data analysis across all areas and full audit trail
- Multiple carbon emission standards
- Comprehensive emission sources
- Extensive CO₂re database provides all necessary emission factors, calculations and conversions
- Benchmarking capability through CO₂re database

Decision Support

- Analyse carbon emissions and consumption data
- Analyse financial cost of consumption
- View carbon based on normalisation factors
- View line level source data and documentation
- Build complex data comparisons
- Set targets, monitor progress and generate carbon reduction scenarios

MIS

- Disseminate information across all stakeholders via the web
- Extensive regulatory and voluntary reporting requirements (e.g. CRC, Carbon Trust Standard and CDP)
- Standard and bespoke reports exportable to Word, PDF and HTML
- Integration with existing applications and Sustainability Performance Management dashboards

KEY BENEFITS

- Reduce costs of data capture
- Auditable data integrity checking
- ROI comparisons for reduction projects
- Simple implementation and no capex requirements
- Outsourced tracking and maintenance of compliance reporting/standards
- Save on carbon audit consultancy fees
- Generation of all required carbon related reports
- Compatible with ISO 14064 and ISO 14001 requirements
